

# Group Policy Management - SecureEdge Inc. GPO User Guide

Here is a simple step by step tutorial on how to create and link a GPO to a user, group or OrganizationalBitLocker: Bitlocker protects data by encrypting drives. Unit. This is done on the Domain Controller using the GPO Management.

We'll have a look at how we applied the Password Policy we discussed during the project's presentation. Policies were applied at both domain level and more granular level directly on each team.

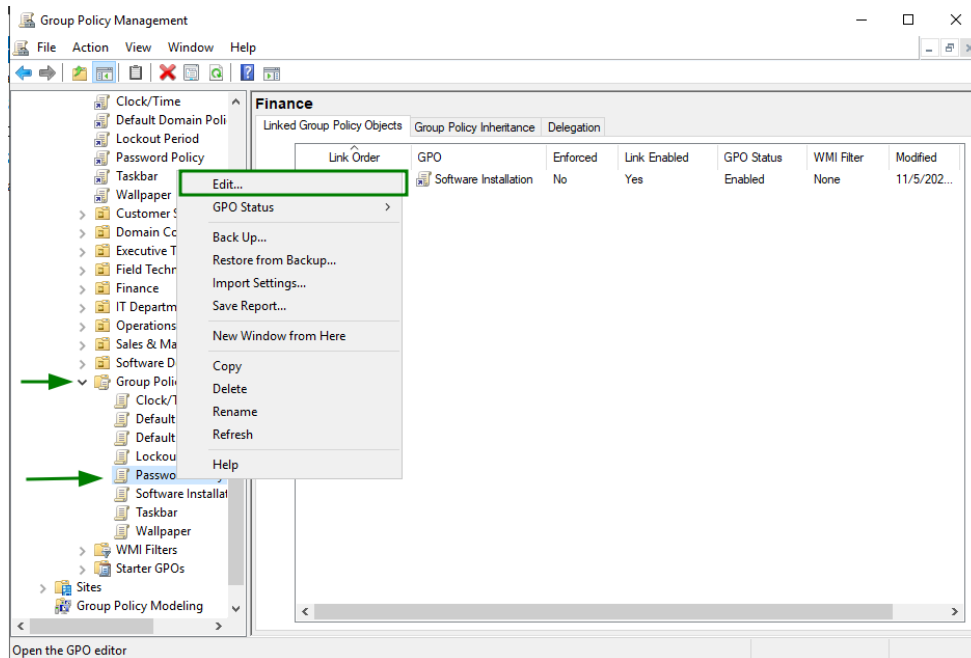

If there's any question or any issue we remain at your disposal at any time.

The first step is to open Group Policy Management. Below we can see all the Organizational Units created for each team and role in the company.

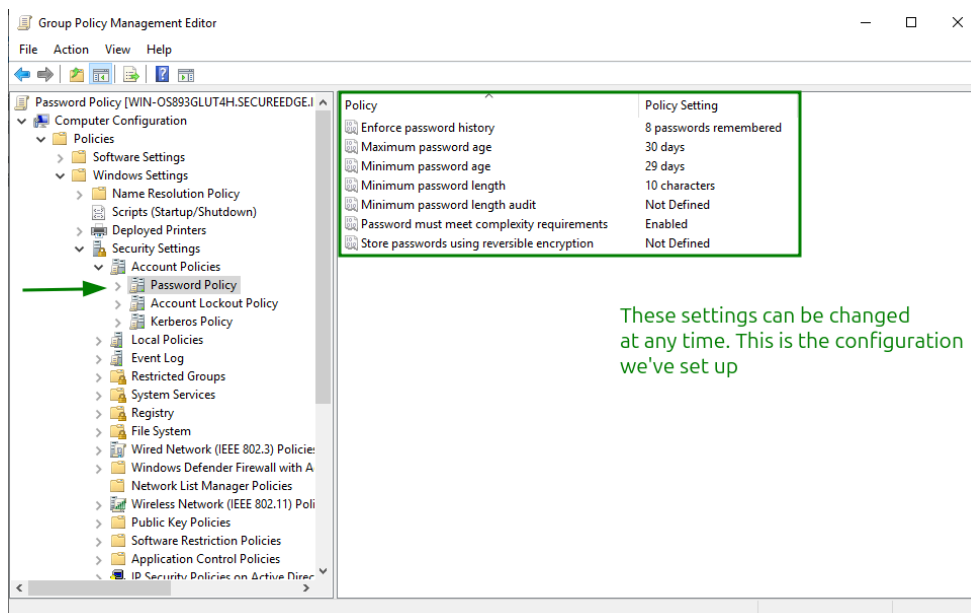

In this main menu we can also see the Group Policy Objects folder where we create and manage any existing GPOs.

To create or edit the password policy, we'll need to go to the Group Policy Object folder and right click on Password Policy (if we want to create a new one, we need to right click Group Policy Object and New)  
In this case, we'll Edit just to confirm the info we already discussed in the presentation.

After we press Edit and follow the steps shown below, we can see the Password Policy and the settings we set up. When we see the policy we want to enable, right click over it and press Edit again.

To link a GPO to any user, group or OU, we right click on top select Link GPO and select what GPO we want to link one of these resources. In this case, we clicked on top of the Finance team as an example. After selecting Link Existing GPO we'll select the GPO we want to assign and finish
